

## Double Aperture Restraint

Adjustable restraining bars, for use in door openings during heavy pulls to help avoid distortion to openings and roof line of the vehicle.

### Additional Information

- Length: 810 - 1000mm.
- Avoid distortion during repair. Light pushing & pulling can be carried out with ease.
- Suitable for use in door openings. The doors can be closed whilst restraints are in place. Adjust length by way of a screw action using the tommy bar provided.
- Manufactured from iron & steel.
- Single aperture restraint, suitable for use in bonnet & boot openings, also available, please see Part No 91834.
