

Trim Removal Tool

The trim removal tool is simple to use and allows for the easy removal of car window strips.

Additional Information

- Wedge width: 350mm, giving a wide surface area to help prevent creasing trims.
- Made from composite material to help prevent damage to coated surfaces.
- Thin leading edge combined with wide profile allows the tool to be inserted under the trim to be removed, allowing the trim to be removed in one movement without excessive distortion.
- Reduces the potential of damage usually caused by screwdrivers being used as pry bars to lever off trims.
