

Heat Inductor 3.5kw

An induction heating system that speeds up and simplifies the removal of bonded components (such as windscreens, plastic trim pieces, bonded badges, stickers, etc) or stuck and seized metal parts (such as nuts, bolts, track rod ends, bearings and gears). By using electromagnetic induction it allows for the transfer of an intense quantity of heat locally, without causing damage to the surrounding area.

Additional Information

- 3.5kw watercooled induction heater.
- Includes heating wand and glass remover block.
- Flameless heat for removing corroded nuts and bolts.
- Also removes trim, stripes, vinyl graphics and decals, together with underseal and windows etc.
- Suitable for bodyshops and workshops.
