

Coating Thickness Gauge Aluminium & Steel

The coating thickness gauge is designed for the safe measurement of paint or coating thickness on metal surfaces. Can display measurements in micrometres (microns) or millimetres.

Additional Information

- For use on either steel or aluminium metal surfaces with flat or curved profiles.
- Auto detection of base material: ferrous (steel, etc) and non-ferrous (aluminium, copper, etc) metals, Suitable for Hybrid and Electric Vehicles.
- Applications include: automotive bodywork, commodity inspection, manufacturing. Ideal for both workshop and outdoor use.
- Contents include: 2x calibration bases (F/NF), 5 x standard calibration foil.
- Requires 2 x AAA batteries (included). Please refer to instructions for use and technical specification. CE, UKCA & RoHS compliant.
