

Cold Glue Dent Pulling Kit PDR

An innovative PDR dent pulling kit that uses cold glue rather than hot glue. With only the heat from the user's hands required to prep the glue for use, no external heat source is required. The kit includes a guide handle together with slide hammer for dent pulling, and is supplied in a rugged blow mould storage case. This updated version now includes an additional washer to protect the aluminium handle from impact, together with a pad holder adaptor making this ideal for hot glue repair, when used with hot glue pads/pulling tabs such as Power-TEC Part No. 92095.

Additional Information

- Paintless dent removal using hand warmed 'cold glue'. No glue gun required.
- Kit includes: 4 alloy glue adaptor pads, slide hammer, hand-pull handle and 50g of cold glue.
- Glue is easily removed by hand and can be reused if kept clean and free from grease. Replacement glue available, see Power-Tec Part No. 92646.
- Safe for use on all vehicle types including EV/Hybrid vehicles. No risk of voltage spikes (associated with traditional 'welding' repair methods).
- Also includes 1x M12 x 1.75 pad holder adaptor for use with glue pads, including Power-TEC Part Nos. 92095, 92378 & 92401.
