

Vehicle Ride Height Gauge

More and more vehicles require the vehicle ride height to be checked and set to ensure that modern driver aids (ADAS etc.) function correctly. The Power-TEC 92666 ride height gauge can be used to measure the ride height either by measuring under the vehicle sills or even under the centre of the vehicle without crawling under the car.

Additional Information

- Use with the car on level ground or on scale/turning pads.
- Measure from 51mm to 350mm (imperial scale also shown). Measure from almost any area under the car.
- Magnetic tape measure head allows measurement to be made while adjusting the ride height.
- For best results measure at identical points either side of the vehicles (4 measurements).
- Equivalent to OEM Tesla 1071271-00-A.
