

Panel Repair Welder & Trolley

A kit that combines the Power-TEC compact panel repair welder (Part No. 92091) with a 4-drawer welding cart (Part No. 92591), supplied with a slide hammer and copper-coated pull triangles (also known as 3-point electrodes) for dent removal on vehicle bodywork. The slide hammer connects to the welder, which holds and welds the copper-coated pull triangles to the panel, allowing the damage to be pulled out. Designed for use with a 230V single-phase power supply, it comes fitted with a 3-pin BS plug and features an integral carry handle for portability.

Additional Information

- Mains powered compact spot welder with an integral slide hammer (Part No. 92091), supplied together with a 4-drawer welding cart (Part No. 92591).
- Welder dimensions: 390 x 260 x 225mm. Weight: 16kg. Cart dimensions: 700 x 290 x 710mm.
- Power supply: 230V, fitted with a 3 pin BS plug. Peak spot-welding current: 2600A. Max absorbed power: 7kw.
- Supplied with: Manual pistol/gun with trigger. Spot earth with cable. Slide hammer included, with consumable triangular copper coated electrodes.
- Consumables also available, please see Part No. 91299 (panel pull triangle 20pc). Can also be used with Power-TEC squiggly wire electrode, Part No. 91246, available separately, together with Part No. 91332 (squiggly wire 10pc) & 91333 (squiggly wire 50pc).
