

Hydraulic Porta Power Kit 10 Tonne

A fully equipped, ready-to-use hydraulic porta power kit, the Power-Tec 92759 has been introduced at the request of our customers. It provides a traditional and highly effective method of pushing or pulling bent panels and chassis structures back into shape, and is powerful enough for most body and chassis straightening work.

Additional Information

- Offers up to 10 tonnes of force in a controlled manner, reducing the risk of unintentionally overloading the vehicle structure.
- Kit includes: 4x push together steel tube extensions, hydraulic ram & hand-operated pump, 6 types of foot connection, together with a spreader ram.
- Hydraulic ram stroke: 135mm. Range: 355-490mm. Extension tube sizes: 100, 200, 300 & 550mm. Weight: 28kg.
- Simple to use & maintain.
- Supplied in a robust moulded case fitted with wheels offering substantial protect & effective storage. CE compliant.
