

Carbonstrike Hammer, PU Ball Pein - 320mm

Carbonstrike hammers, commonly known by professionals as knock-down or blending hammers, are specifically designed for paintless dent repair (PDR). Their main attribute is precision and control, helping to reduce "high spots" or "crowns" created during the dent removal process. Carbonstrike hammers are constructed from carbon fibre, providing extra strength while remaining lightweight for improved balance. The user can accurately control each strike, and the spherical handle offers additional comfort, enabling optimal results with minimal effort and fatigue.

Additional Information

- Lightweight for precise control & reduced effort. Ball-shaped weighted handle end helps to improve balance & comfort.
- Features removeable soft PU (Polyurethane) slightly dome-shaped face & ball pein heads.
- Aluminium main head with leather & stainless flat side faces.
- Carbon fibre handle for superior strength, rigidity, lightness & feel.
- Handle length: 320mm. Other models also available 410mm (Part No. 92765) & 490mm (Part No. 92766).
